

FOR IMMEDIATE RELEASE

**M*MODAL'S ADVANCED SPEECH RECOGNITION TECHNOLOGY
INCORPORATED INTO SCRIBE'S WEB-BASED DOCUMENTATION SOLUTIONS**

Partnership Increases Accuracy and Productivity and Reduces Turnaround Time

PITTSBURGH, PA, APRIL 29, 2009 – M*Modal today announced Scribe Healthcare Technology has incorporated the company's Speech Understanding technology into its web-based medical dictation, transcription and archival solutions.

Scribe's technology offerings simplify the business of medicine by providing web-based solutions for clinical information production, workflow management and analysis to healthcare providers and medical transcription service organizations that service them. The company is the leader in web-native medical dictation, transcription and archival solutions for the clinical information (documentation, transcription) segment of the healthcare marketplace. The company currently services more than 20,000 users in over 2,000 locations.

“When we saw how M*Modal's transformational Speech Understanding technology could enhance Scribe's current offerings, it made perfect sense to incorporate their web-based clinical documentation solution into ours.” said Mark Boyce, Scribe President and CEO. “Our partnership will increase clinical documentation accuracy and share ability to allow healthcare providers more time to focus on patient care.”

Scribe's technology has been developed by healthcare professionals for healthcare professionals with the objective of providing easily adopted web-based applications which do not require physicians to reinvent the way they practice medicine. M*Modal's transformational Speech Understanding solution, AnyModal™ CDS (Conversational Documentation Services), designed in a similar fashion, captures and comprehends clinical information from dictation, transforming it directly into accessible, retrievable, and shareable electronic files.

The web-based Scribe Platform provides a unique set of tools for the creation, production, storage, communication, sharing, and analysis of clinical information. The accessible clinical information repository is built to be accessible anywhere at anytime to allow timely, but secure patient information exchange and transmittal. The web-native applications are cost-effective requiring no upfront software or hardware purchases. An Internet-connected computer and Web browser are the only requirements needed to use the services with charges based on actual usage.

Scribe solutions simplify the business of medicine by allowing:

- Physicians to reduce the time it takes to document patient encounters and centralize records in one anywhere, anytime accessible place.
- Healthcare Administrators and Transcription Companies to work more efficiently and cost effectively by streamlining their workflow management.
- Hospitals and practices to optimize financial results by lowering costs and increasing reimbursement through access to analytical tools that provide the right information at the right time.
- Patients to have easy access to their medical information.
- Transcription companies to enhance their technology offerings to their customers via Scribe.

“We are pleased to work with a company that is advancing the medical documentation field through its innovative web-based services,” said Michael Finke, CEO of M*Modal. “Our combined technologies offer solutions that are scalable, affordable, and extremely easy to manage providing the ability to serve smaller as well as larger clients.”

ABOUT SCRIBE

Scribe Healthcare Technologies is a privately-held healthcare technology company based in the Chicago area. The company has developed a proprietary web-native platform that complements and extends the value for patient registration, Practice/Hospital Management and EMR Solutions. Scribe’s platform includes complete solutions for dictation, transcription, document management, EMR-Lite, Web portal, and reporting with data analytics.

Scribe serves more than 20,000 users. Business partners and resellers include consulting firms, transcription companies, and business process outsourcers. Additional information is available at www.scribe.com.

ABOUT M*MODAL

M*Modal, based in Pittsburgh, PA, offers on-demand conversational documentation services that help healthcare providers capture discrete clinical information from dictation to generate complete and timely electronic medical records. The company's unique Speech Understanding technology platform, AnyModal CDS, is a vital tool that empowers physicians to capture clinical facts and orders from dictation without requiring any change to their normal dictation routine. M*Modal's focus is on providing hospitals, healthcare IT vendors, and medical transcription service providers with the industry's most comprehensive yet most adaptable solution for creating highly accurate, structured, encoded, and shareable medical documents to increase patient safety, promote continuity of patient care, and reduce cost. For more information on M*Modal, visit its Web site at: www.mmodal.com.
